TO WHOM IT MAY CONCERN

I am very glad of this opportunity to give **Mr. *Jash Vaidya*** a letter of recommendation. He was my student for two semesters. During such a long period of time I was able to assess his intellectual as well as "soft" skills. I witnessed also his growth and development.

What I'd like to emphasize is that he is an open-minded person and has very good analytical and abstract thinking skills. Throughout the labs and workshops on Requirements Engineering, he was always able to provide very interesting ideas and non-standard solutions to given problems. Not only were his insights analytically sound, but they also contributed greatly to the class discussion. Most of his projects and tests I graded highly.
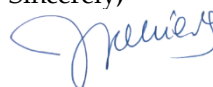

It is also important to mention that he possesses sound knowledge and abilities in applying theoretical concepts to practical problems from different perspectives. It is no exaggeration to say that this kind of problem solving skills is very important in contemporary workplace regardless of industry and post.

In my opinion Mr. *Jash Vaidya* is intelligent, ambitious and hard working young person with superior preparation for interdisciplinary work.

I believe that Mr. *Jash Vaidya* will be a great asset to your institution and therefore I fully support his application for whatever post he has applied.

Hopefully, the information I provided will be of assistance and I will be happy to give additional information if required.

Sincerely,

Jacek JAKIEŁA
